Subject: United Heckathorn Site - Levine Questions

Hi Jim,

Hope this email finds you well. A few questions have come up about Levine activities at the United Heckathorn site, and I wanted to get your input/confirmation.

•□□□□□□□ Has Levine conducted any dredging activities in the Lauritzen Channel after 2013. If you have, can you please provide approximate quantities and location of removal? I don't think you have, but just wanted to confirm.

•□□□□□□□ In the most recent Annual Report, it is stated *In 2015, piping was installed from interceptor SW-3 to the 20,000 gallon tank located near interceptor SW-5, and the 20,000 gallon tank near interceptor SW-3 was relocated to the SW-5 area. A storm water treatment system will be installed at the SW-5 discharge location in 2015 to prevent or reduce the discharge of pollutants in storm water from industrial activities. The system will treat storm water pumped from interceptors SW-3, SW-4, SW-5, SW-6, and SW-7 using flocculation, settling, and filtration methods. Treated storm water will be discharged to the Lauritzen Channel via the SW-5 outfall. Based on our discussion during the 5-Year Review Inspection, I believe that this work has already been done, right? If not, what is that status of this project and what is its target completion date?*

Please feel free to call me with questions.

Thank you in advance for your time,

Jamie
